## MISSISSIPPI STATE DEPARTMENT OF HEALT 17013 JUN -7 AM 10: 25 BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION FORM

CALENDAR YEAR 2012  GREEN ACRES WATER ASSOCIATION, INC.
Public Water Supply Name
MS0140007 - 0140013
List PWS ID #s for all Community Water Systems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply.
Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill)
On water bills (attach copy of bill)  Email message (MUST Email the message to the address below)  Other
Date(s) customers were informed: 5 /29 / 13, / / , / /
CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used
Date Mailed/Distributed: / /
□ CCR was distributed by Email (MUST Email MSDH a copy) □ As a URL (Provide URL □ As an attachment □ As text within the body of the email message
CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
Name of Newspaper: The Clarksdale Press Reguster
Date Published: 5 / 8 / 13
☐ CCR was posted in public places. (Attach list of locations)  Date Posted: //
CCR was posted on a publicly accessible internet site at the following address ( <b>DIRECT URL REQUIRED</b> ):
CERTIFICATION I hereby certify that the 2012 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.
Name/Title (President, Mayor, Owner, etc.)  6/3/13  Date

Deliver or send via U.S. Postal Service: Bureau of Public Water Supply P.O. Box 1700 Jackson, MS 39215

SECRETARY/TREASURER

May be faxed to: (601)576-7800

May be emailed to: Melanie.Yanklowski@msdh.state.ms.us

## 2012 Annual Drinking Water Quality Report Green Acres Water Association, Inc. PWS#: 0140007 & 0140013 April 2013

2013 JUN -7 AM 10: 26

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from two wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Green Acres Water Association have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Thomas E. Clayton, Jr. at 662-326-6921. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held annually on August 20, 2013 at 7:30 PM at the Coahoma County Court House — Supervisor's Room.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2012. In cases where monitoring wasn't required in 2012, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) — The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

<sup>\*</sup> Most recent sample. No sample required for 2012.

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe

Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

## \*\*\*\*\*April 1, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING\*\*\*\*\*

In accordance with the Radionuclides Rule, all community public water supplies were requires to sample quarterly for radionuclides beginning January 2007 – December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 601.576.7518.

The Green Acres Water Association, Inc. works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

## Struggles

Continued from Page 1

Rogelio V. Solis/Associated Press

"The children don't have

said. "Some of them have

never peen tead to or tead books at home."

Valarie Davis

In this Feb. 15, 2013 photograph, Clarkadel High School etu-dents delve into the complexities of math. The city's nine pul-tic schools may also be the crossroads of Mississippi's educa-tion system as state termakers are considering a new route, one characterized by charter schools, teacher ment pay, a tougher statewide curriculum, state-paid prescricel classes and an intensive focus on reading for young students.

assistant teacher who has a son in first grade.
They are doing exactly the background, "Davis what they can do."

There's still a long way to go. The overall dis-trict and Clarksdale High School were exempted from Mississippi's A-to-F school grading system

- Principal, Myrtle Hall IV, r because of the last year because of the high school curriculum

nign school curriculum pilot. Results from elementary and middle schools were mixed. Two of six elementary school got B grades. But two elementary schools and both middle schools were graded to

die schools were graded F.

One big change coming in Mississippi is a requirement to hold back children in grades K-3 who aren't reading at grade level. That's modeled on laws adopted in Florida and 13 other states.

Der

on laws adopted in Florida and 13 other states.
Clarksdale's elementary schools are trying to
improve student literacy. Valarie Davis, principal at improve student Heracy. Valario Davis, principal at Myrite Hall IV Elementary, said the biggest reading challenge is lack of preparation at home, reflecting powerty and low parental education levels. "The children don't have the background," Davis

said. "Some of them have never been read to or read books at home."

read books at home."

Preschool preparation for kindergarten could case that problem. Mississippi has been the only state in the South and one of only 11 nationwide with no state-funded preschool program. But law-makers approved a plan for school districts, Head Start centers and private child care operators to tointly provide voluntary preschool for 4-year-olds start centers and private chuit care operators to jointly provide voluntary preschool for 4-year-olds. Clarksdale is already using federal money to run three 20-student preschool classes, butting it among the constituted of Microbians allegated departs on the constituted of the constituted the one-third of Mississippi districts doing so even

the one-third of wissassipper
without state aid.
Clarksdale could also be an early target for a
charter school under a new law easing creation of
the alternative public schools. The Knowledge is the atternative public sensors. The Knowledge is Power Program, a national group, operates a char-ter school in nearby Helena-West Helena, Ark. The ter school in hearby Helena west Helena, Ark. The group has expressed interest in Clarksdale and many Mississippi leaders have said the school is a model. Some Clarksdale residents, including

model. Some Clarksdale residents, including Luckett and his mayoral rival, Democratic state Rep. Chuck Espy, also support charter schools. Dupree says the public school system is striving to be so attractive that parents will choose public schools even if a charter school opens. "When there's choice, we want to be the choice," he said.

he said.
